### **INTRODUCTION:**

The Kumbh Mela is one of the largest and most sacred religious gatherings in the world, held every 12 years at four rotating locations in India: Prayagraj, Haridwar, Nashik, and Ujjain. The upcoming Maha Kumbh Mela 2025 is scheduled to take place in Prayagraj, at the holy confluence of the Ganga, Yamuna, and the mythical Saraswati rivers. This site, known as the Triveni Sangam, holds immense spiritual significance for millions of Hindu devotees who come to bathe in its waters, seeking absolution from their sins and spiritual purification.

The scale of the Kumbh Mela is unparalleled, with attendance often exceeding tens of millions over the course of the festival. In 2019, the Prayagraj Kumbh saw a staggering 240 million visitors, including both domestic and international pilgrims. During peak days like the Shahi Snan (royal bath), daily footfalls can reach over 30 million, making it one of humanity's greatest mass gatherings.

While the Kumbh Mela fosters spiritual and cultural unity, the sheer magnitude of attendees poses significant environmental challenges, particularly to the Ganga River. The river, already burdened by industrial discharge, agricultural runoff, and urban waste, faces further stress during the festival. The excessive use of plastic, disposable items, and untreated waste generated by pilgrims contributes to severe pollution, threatening aquatic ecosystems and the overall health of the river. The deposition of ritual offerings, soaps, and detergents used for bathing further exacerbates water contamination.

Efforts like the "Thali Thela" campaign aim to address these issues by promoting sustainable practices during the Maha Kumbh Mela, ensuring that this sacred tradition continues to thrive without compromising the health of the environment.
