Education

Gujarat Technological University **July 2023 – June 2027**
Bachelor in Computer Engineering *Surat, Gujarat*

Relevant Coursework

- Data Structures
- Web Development
- Algorithms Analysis
- Python For Data Science
- Generative AI

Projects

WhisperPDF |React.js, TypeScript, Redis-Stack, LangChain, Gemini May 2025

- Designed and deployed WhisperPDF, a conversational PDF chatbot powered by Gemini and RAG architecture.
- Delivered accurate, explainable answers with page-level citations for better trust and transparency.
- Engineered a drag-and-drop PDF upload UI with React + TypeScript for seamless interaction.
- Integrated Clerk authentication to enable secure, smooth user sign-in and management.
- Scaled performance with BullMQ task queues and Qdrant vector DB for efficient retrieval.

ByteBudget | MERN Stack, React-Charts, pdfkit, Multer Aug 2025

- Developed ByteBudget, a full-featured MERN stack expense tracker that transforms transactions into actionable financial insights.
- Implemented secure authentication and a responsive dashboard for seamless user experience.
- Integrated interactive React-Charts to visualize financial trends and spending patterns.
- Added support for monthly income goals and spending limits with instant feedback alerts.
- Enabled PDF report generation via pdfkit and smooth file handling with multer.

WatchWise | Gemini API, MERN Stack, ShadCN UI September 2025

- Developed WatchWise, an AI-powered movie recommendation platform built using the MERN stack, designed to deliver personalized film suggestions based on user preferences.
- Implemented intelligent movie recommendations by integrating Google Gemini API, allowing users to receive curated suggestions based on genre, mood, and language inputs.
- Designed a modern, responsive UI using ShadCN UI and Tailwind CSS for a clean and professional user experience.Integrated interactive React-Charts to visualize financial trends and spending patterns.
- Enabled AI-generated detailed movie descriptions, including storyline insights, and viewing recommendations.
- Ensured optimized state management and seamless frontend-backend communication using RESTful APIs.

QuizSprint | Typescript,React.js,PostgressSQL,PrismaORM January 2026

- Developed a multi-round interactive quiz application with automated qualification and elimination logic.
- Implemented round-based progression (3 rounds) featuring instant result evaluation and final winner determination.
- Built admin-driven quiz management tools for question creation, difficulty configuration, and quiz flow control.
- Designed a secure authentication system with email verification, protected routes, and forgot-password recovery flow.
- Ensured synchronized application state across participants with smooth UI transitions and accurate status updates.

Technical Skills

Languages: C, C++, JavaScript, TypeScript, SQL, Python, MongoDB,PostgressSQL,Prisma
Developer Tools: VS Code, Cursor, Jupyter Notebook
Technologies/Frameworks: Linux, Git, GitHub, React.js, GSAP, Express.js, LangChain, LangGraph, Numpy, Pandas
